

CONDENSING **COMMERCIAL** **BOILERS**

PRODUCT GUIDE

Ideal Commercial Heating is the **UK's market leader** of high efficiency commercial heating solutions.

Operating from our Hull manufacturing plant and offices since 1906, we are one of the few true British manufacturers left in the heating industry. All the years of experience we have of designing and manufacturing commercial boilers for the UK market has gone into today's condensing commercial boiler range. Whether a wall hung or floor standing solution is required, you will be specifying a product that comes with over 120 years of knowledge and skill, as standard.

FEATURES AND BENEFITS

- Robust cast aluminium silicon alloy heat exchanger
- NOx <40mg/kWh (Class 6) for all natural gas models
- High 5:1 turndown
- Up to 99.6% full load efficiency
- Up to 110% part load efficiency
- Exactly the same compact footprint as Evomax, allowing for easy like for like replacement
- Dynamic control menu set up
- Cascade controls option
- Easy servicing; 3 sides removable
- Built in, serviceable flue Non-Return Valve
- Capable of operating at up to 30° ΔT

A

Applies to Evomax 2 30, 40 and 60kW models only.

DIMENSIONS AND CLEARANCES

BOILER	DIM A	DIM B
30, 40, 60, 80	360	130
100, 120	520	226
150	610	233

All dimensions in mm

The following minimum clearances must be maintained for operation and servicing:

CLEARANCE BETWEEN MULTIPLE BOILER INSTALLATIONS: **25mm**

BOILER ASSEMBLY INTERNAL VIEW (40kW MODEL SHOWN)

SUGGESTED ENGINEERING SPECIFICATION

The Suggested Engineering Specification is wording designed for specifiers to copy and paste into their specifications to ensure inclusion of Ideal Heating commercial boilers.

OVERVIEW

The boilers must be fully automatically controlled, wall mounted, fanned, super-efficient condensing appliances utilising an aluminium silicon alloy heat exchanger and be suitable for connection to fully pumped open vented or sealed water systems.

CONTROLS

The condensing boilers must have connectivity for all common types of BMS integration including 0-10v, volt free and OpenTherm connections. Additional modules may be used for BACnet, LONWorks and MODBus gateways. Where no BMS is present a modulating sequencer must be available.

The boiler must be fully modulating with a 5:1 turndown ratio and include control features enabling set point adjustment, heating circuit control of one constant temperature and one DHW circuit or 2 constant temperature circuits, and safety lock out parameters including fault diagnosis for both boiler and external components such as sensors or pumps.

Boiler capabilities must include, with the use of external components, frost protection, weather or room compensation and system pump control.

FLUE

The condensing boilers must be suitable for use with a room sealed flue or open flue applications including C13, C33 and B23 classifications. The combined flue outlet and air inlet must be situated on the top of the boiler.

HYDRAULIC

The condensing boiler must be and be suitable for connection to fully pumped open vented or sealed water systems. All hydraulic connections including flow return and condensate drain must be located on the bottom of the boiler. Hydraulic connections must be uniform across the outputs available in the range to ensure ease of installation and maintenance in mixed output cascades. The boiler must have a maximum operating pressure of 6 bar and be suitable for heating and indirect hot water systems.

DIMENSIONS

The condensing boiler range must have a universal compact width and height across the range to ensure mixed output cascades maintain the same universal configuration. Maximum permitted wall area of 0.43m².

MOUNTING

The condensing boilers can be installed either on the wall or into a prefabricated floor mounted frame. Wall brackets must be located at the top of the boiler and visible from the front to aid installation.

EFFICIENCY

The condensing boilers are capable of high seasonal efficiencies with a minimum requirement of 96.2% and low NOx emissions no greater than 39.8mg/kWh for natural gas and 80mg/kWh for LPG.

30, 40 and 60kW models must have a Seasonal Space Heating Energy Efficiency of A.

APPROVALS

The boiler must be tested and certified to EN 483, EN 677, PREN 15420, BS EN 15502, BS EN 656, BS EN 55014-1 and BS EN 55014-2 for use with Natural Gas. Boilers are certified to meet the requirements of the EC Gas Appliance Directive, Boiler Efficiency Directive, EMC and Low Voltage Directive.

The manufacturer must be ISO 9001 accredited.

SPECIFICATION

- The 30kW boiler will be capable of flow rates for common systems using either 11°C, 15°C, 20°C or 25°C temperature differentials.
- The 40, 60 and 80kW boiler will be capable of flow rates for common systems using either 11°C, 15°C, 20°C, 25°C or 30°C temperature differentials.
- The 100kW boiler will be capable of flow rates for common systems using either 15°C, 20°C, 25°C or 30°C temperature differentials.
- The 120 and 150kW boiler will be capable of flow rates for common systems using either 20°C, 25°C or 30°C temperature differentials.

SOURCING

The condensing boiler must be manufactured or finally assembled in the United Kingdom.

CASCADE

The boiler must be configurable up to 6 boilers (max 900kW) in cascade using a prefabricated frame and header kit.

WARRANTY

The boiler must be available with a 5 year warranty.

SYSTEM TEMPERATURE DIFFERENTIALS

Flow rates for common systems using either 11°C, 15°C, 20°C, 25°C or 30°C temperature differentials are given in the table below.

BOILER	FLOW RATE (L/MIN)					HYDRAULIC RESISTANCE (MBAR)				
	11°C	15°C	20°C	25°C	30°C	11°C	15°C	20°C	25°C	30°C
Evomax 2 30 / 30P	39.1	28.7	21.5	17.9	N/A	425	225	127	89	N/A
Evomax 2 40 / 40P	52.1	38.2	28.7	23.9	19.1	875	405	225	163	100
Evomax 2 60 / 60P	78.2	57.3	43.0	35.9	28.7	435	180	83	57	30
Evomax 2 80 / 80P	104.2	76.4	57.3	47.8	38.2	750	420	180	125	70
Evomax 2 100 / 100P	N/A	95.6	71.7	59.8	47.8	N/A	315	134	97	60
Evomax 2 120 / 120P	N/A	N/A	86.0	71.7	57.3	N/A	N/A	218	149	80
Evomax 2 150	N/A	N/A	107.5	89.6	71.7	N/A	N/A	230	158	85

- 30kW boilers must operate with temperature differentials from 11°C to 25°C.
- 40, 60 and 80kW boilers must operate with temperature differentials from 11°C to 30°C.
- 100kW boilers must operate with temperature differentials from 15°C to 30°C.
- 120 and 150kW boilers must operate with temperature differentials from 20°C to 30°C.

CONTROL KITS

VARICAN MODULE MASTER and SLAVE KITS

Enables cascade control from Evomax 2 boiler controls

EXTENSION MODULE KIT

Capable of managing 2 mixing circuits. Multiple modules can be used

OPENTHERM ROOM CONTROL KIT

Timed control of central heating via OPENTHERM

ROOM SENSOR KIT

Used with Extension Module Kit for CH control

TANK SENSOR KIT

Provides DHW temperature control. Also for use with Extension Module Kit

OUTSIDE SENSOR KIT

Provides weather compensation directly or with Extension Module Kit

HEADER FLOW TANK IMMERSION SENSOR KIT

Ensures boiler provides correct temperature to water in header via immersed sensor

HEADER FLOW TANK STRAP ON SENSOR KIT

Ensures boiler provides correct temperature to water in header via external sensor

SAFETY INTERLOCK KIT

Provides boiler shut down via an external signal

FLUE SYSTEMS

A comprehensive range of flue kits are available from Ideal Heating including horizontal and vertical concentric and open flue options.

For horizontal flues: this is the distance from the flue outlet centre line on the boiler to the outside wall.

For vertical flue: this is the distance from the top of the boiler case to the aperture in the weather collar. If elbows are to be used, then the equivalent length of that fitting must be subtracted from the maximum flue extensions allowed for that flue option.

Note: Horizontal terminal resistance includes 1 x 90° elbow.

When installing Evomax 2 boilers with concentric flue (horizontally or vertically) the Ideal commercial flue system must be used.

The resistance of flue components, together with the maximum flue resistance each boiler can work against, may be used to calculate the total flue resistance of the system, and to determine if they are acceptable to run on the boiler. Multiple boilers may be installed with a common flue header.

The flue system should be designed and supplied by a specialist flue company. BS 6644 and IGEM UP10 provide guidance on design and the drainage of condensate from flue stack and headers. Condensate from a flue stack and header must be collected and drained before entering the boiler.

For Ventilation requirements, please refer to the Installation Manual.

EVOMAX 2 CASCADE

30 - 900kW

Cascade
control

EVOMAX 2 CASCADE

Frame and Header Kits

For installations requiring more output delivered in a flexible way, up to 6 Evomax 2 boilers can be installed in a cascade. An output of up to 900kW is possible with this modular option which is available in both Inline (Standard and Low Height) and Back to Back arrangements.

Our online Cascade Configurator makes sure you have everything you need for cascade arrangements. By answering some simple questions about the installation, the tool will list all the products needed for that cascade; download as a PDF or have it emailed directly to you for maximum convenience.

Scan the QR code below to use the tool.

CHOOSING WHAT YOU NEED IS STRAIGHTFORWARD:

Choose frames: select Standard or Low Height Frames, or mount on a wall

Choose a header: select an Inline or Back to Back configuration for the total number of boilers in the cascade

Choose hydraulic separation: select Plate Heat Exchanger, Magentic Low Loss Header or Low Loss Header

Choose pumps: select the relevant pump for your cascade

Choose insulation: select the insulation for a Header, Separation and Pumps

A few things to bear in mind:

- A Standard Height Inline or Back to Back cascade can be for up to 6 boilers
- A Low Height Inline cascade can be for up to 4 boilers
- 1 Standard Height Frame required for each boiler in the cascade
- 1 pump required for each boiler in the cascade

The wide range of options available are detailed on the pages overleaf. Alternatively, use our online Evomax 2 Cascade Configurator tool to compile a complete list of accessories for your cascade:

idealcommercialboilers.com/evomax2-cascade-configurator

EVOMAX 2

Cascade Accessories

CHOOSE A FRAME KIT

Standard Height

Up to 6 boilers
206970

1 frame required per boiler i.e. a 6 boiler cascade requires 6 frames

Low Height Inline

Up to 4 boilers
Included with Low Height Header Kit

Boilers not included with Frame or Header Kits; please remember to add them to your order.

EVOMAX2 PHEX PACKAGE

234562

A complete package to allow installation of single boilers with hydraulic separation from the secondary system using a brazed plate stainless steel plate heat exchanger. The boiler side of the package includes expansion vessel, pressure gauge, pressure relief valve, filling point and drain connection. Suitable for all Evomax2 boiler models with standard operating temperatures of 85/65°C boiler side and 75/55°C secondary side. Please contact your local sales representative to discuss other operating temperature profiles.

A complete package requires an Evomax2 boiler and boiler pump to be added.

HYDRAULIC SEPARATION

Ideal Heating offer various solutions to hydraulic separation

PLATE HEAT EXCHANGER

Covering outputs of 60, 150, 300, 450, 600, 750 and 900kW. Brazed Plate Heat Exchangers ensure optimum heat transfer efficiency and low resistance within a compact footprint. To be used with Ideal Heating Frame and Header kits.

FEATURES AND BENEFITS

- Compact design
- No gaskets
- Low maintenance and self-cleaning
- All units are pressure tested
- To be used with Ideal Heating Frame and Header kits
- Ensures optimal heat transfer efficiency and pressure resistance
- Separates system water from the boiler
- Ensures the highest performance for longest possible service life

222192	DN65
222193	DN80
222194	DN100

PUMPS

To ensure your Evomax 2 Cascade works correctly, it is vital to fit the correct pumps. One pump is required per boiler in the Cascade.

SEPARATION CHOSEN	UIN	PUMP TYPE
(M)LLH	222659	Grundfos UPM10L (M) LLH pump kit
PHEX or none	222660	Grundfos UPM10XL PHEX pump kit

UPM10

Note: pumps with screwed connections are G1.1/2" x 180mm.

INSULATION

Header kits and Low Loss Headers can be insulated using our robust expanded polypropylene modular insulation range. Insulation is also available for 222659 Grundfos UPM10L (M) LLH pump kit.

The number of boilers in your Cascade will determine the type and number of kits required.

SYSTEM LAYOUT

TYPICAL SYSTEM BOILER LAYOUT

EVOMAX 2 FRAME AND HEADER KIT C/W PLATE HEAT EXCHANGER

Note: this schematic is an illustration of a hydraulic arrangement for discussion and reference use only.

The schematic may not accurately describe the actual arrangement required in order for the system to operate correctly and additional components may be required. Under no circumstances should this be used as basis for procurement, production or installation.

IMAX XTRA 2

80 - 280kW

effici

cient

IMAX XTRA 2

80 - 280kW

The Imax Xtra 2 range of condensing boilers is offered in six models with outputs from 80 to 280kW. These floor standing boilers can be installed on their own or in a cascade of up to 4 boilers for output up to 1120kW output.

Free commissioning

Wheeled for easy installation

BIM

NOx class 6

ErP compliant

Part L 2022

FEATURES AND BENEFITS

- Free commissioning
- 5 year heat exchanger warranty*
- Robust cast aluminium silicon alloy heat exchanger
- NOx <40mg/kWh (Class 6) when operating on natural gas
- Full colour touchscreen control
- High 5:1 turndown
- Up to 97.7% full load efficiency
- Up to 108.2% part load efficiency
- Cascade header kits and controls
- Compact size - small footprint and fits through standard doorways
- Fitted with wheels for easy installation
- Capable of operating at up to 30°C ΔT

SUGGESTED ENGINEERING SPECIFICATION

The Suggested Engineering Specification is wording designed for specifiers to copy and paste into their specifications to ensure inclusion of Ideal Heating commercial boilers.

OVERVIEW

The boilers must be fully automatically controlled, floor standing, fanned, super-efficient condensing appliances utilising an aluminium silicon alloy heat exchanger and be suitable for connection to fully pumped open vented or sealed water systems.

CONTROLS

The condensing boilers must have connectivity for common types of BMS integration including 0-10V, switched live and OpenTherm connections. Where no BMS is present or where the BMS only provides a single control signal for multiple boilers, the boilers should provide cascade and sequencing functions through optional controls accessories.

The boiler must be fully modulating with a 5:1 turndown ratio and include control features enabling modulating boiler pump control, set point adjustment, heating circuit control of one constant temperature circuit, and safety lock out parameters including fault diagnosis for both boiler and external components such as sensors or pumps. Boiler capabilities must include, with the use of external components, up to two additional constant or variable temperature circuits, frost protection, weather or room compensation and modulating system pump control.

FLUE

The condensing boilers must be suitable for use with a room sealed flue or open flue applications including C13, C33 and B23 classifications. The flue outlet and air inlet must be situated at the rear of the boiler with the air inlet having a factory fitted filter element and the flue incorporating a condensate collector.

HYDRAULIC

The condensing boiler must be suitable for connection to fully pumped open vented or sealed water systems. All hydraulic connections including flow return and condensate drain must be located on the rear of the boiler. Hydraulic connections must be of uniform size across the outputs available in the range to ensure ease of installation and maintenance in mixed output cascades. The boiler must have a maximum operating pressure of 6 bar and be suitable for heating and indirect hot water systems.

CASCADE

The boiler must be configurable up to 4 boilers (max 1120kW) in cascade using a prefabricated header kit, to be hydraulically separated from systems using a range of Low Loss or Magnetic Low Headers or a range of Braze Plate Heat Exchangers.

DIMENSIONS

The condensing boiler must fit within maximum permitted floor space of 0.48m² (80 – 160kW models) or 0.63m² (200 – 280kW models).

MOUNTING / POSITIONING

The condensing boilers will be floor standing and provide wheels or other integrated means to ease final positioning of the appliance.

EFFICIENCY

The condensing boilers are capable of high seasonal efficiencies with a minimum requirement of 95.7% and low NOx emissions no greater than 35mg/kWh.

APPROVALS

The boiler must be tested and certified to EN 483, EN 677, PREN 15420, BS EN 15502, BS EN 656, BS EN 55014-1 and BS EN 55014-2 for use with Natural Gas. Boilers are certified to meet the requirements of the EC Gas Appliance Directive, Boiler Efficiency Directive, EMC and Low Voltage Directive.

The manufacturer must be ISO 9001 accredited.

SPECIFICATION

The boiler will be capable of flow rates for common systems using 11°C to 30°C temperature differentials at maximum rate of fire.

SOURCING

The condensing boiler must be manufactured or finally assembled in the United Kingdom.

WARRANTY

The boiler must be available with a 2-year warranty, with the possibility to extend coverage on the heat exchanger to 5-years (TandCs apply).

SYSTEM TEMPERATURE DIFFERENTIALS

Flow rates for common systems using either 11°C, 20°C or 30°C temperature differentials are given in the table below.

	FLOW RATE (L/s)			HYDRAULIC RESISTANCE (MBAR)		
BOILER	11°C	20°C	30°C	11°C	20°C	30°C
Imax Xtra 2 80	1.78	0.98	0.65	264	80	36
Imax Xtra 2 120	2.68	1.47	0.98	281	85	38
Imax Xtra 2 160	3.57	1.96	1.31	297	90	40
Imax Xtra 2 200	4.51	2.48	1.65	314	95	42
Imax Xtra 2 240	5.42	2.98	1.98	330	100	44
Imax Xtra 2 280	6.32	3.47	2.31	347	105	47

CONTROL KITS

CASCADE CONTROL KIT

DUAL HEATING CIRCUIT KIT

Clip in kit adds a two additional variable temperature circuits

PWM TO 10V PUMP CONVERTER KIT

Converts Imax Xtra 2's PWM signal to 0-10V to enable pump control. Included with 226432 Grundfos Magna3 40-80F Pump Kit and 226433 Grundfos Magna3 40-100F Pump Kit

IMAX XTRA 2 CASCADE

80 - 1120kW

Cascade
control

For installations requiring more output delivered in a flexible way, up to 4 Imax Xtra 2 boilers can be installed in a cascade. An output of up to 1120kW is possible with this modular option.

Our online **Cascade Configurator** makes sure you have everything you need for cascade arrangements. By answering some simple questions about the installation, the tool will list all the products needed for that cascade; download as a PDF or have it emailed directly to you for maximum convenience.

Scan the QR code below to use the online tool.

IMAX XTRA 2
**CASCADE
CONFIGURATOR**

CHOOSING WHAT YOU NEED IS STRAIGHTFORWARD:

Simply choose the number of boilers in your cascade and then select the hydraulic separation and pumps you require. Please note you will need 1 pump for each boiler in the cascade.

Our Header kits come with all the parts you need for an inline, side-by-side installation. If your installation requires a bespoke cascade, the individual parts can also be purchased.

Ideal Heating offer various solutions to hydraulic separation

PLATE HEAT EXCHANGER

Covering outputs of 150, 300, 450, 600, 750, 900 and 1200kW. Brazed Plate Heat Exchangers ensure optimum heat transfer efficiency and low resistance within a compact footprint. To be used with Ideal Heating Header kits.

FEATURES and BENEFITS

- Compact design
- No gaskets
- Low maintenance and self-cleaning
- All units are pressure tested
- To be used with Ideal Heating Header kits
- Ensures optimal heat transfer efficiency and pressure resistance
- Separates system water from the boiler
- Ensures the highest performance for longest possible service life

LOW LOSS HEADER AND MAGNETIC LOW LOSS HEADER

Providing an alternative approach to hydraulic separation, Low Loss Headers (LLH) are available in various sizes to suit the accompanying Header kits. There is also the option of a Magnetic Low Loss Header (MLLH), combining the benefits of a low loss header and a magnetic filter.

PUMPS

To ensure your Imax Xtra 2 Cascade works correctly, it is vital to fit the correct pumps. One pump is required per boiler in the Cascade.

CHOOSE PUMPS
80 and 120kW boilers, all installations
Grundfos UPM10L (M) LLH pump kit 222659
160kW boilers, all installations
Grundfos UPM10XL PHEX pump kit 222660
200 - 280kW boilers, (M)LLH chosen or no separation
Grundfos Magna3 40-80F Pump Kit 226432
200 - 280kW boilers, PHEX chosen
Grundfos Magna3 40-100F Pump Kit 226433

1 pump required per boiler.
i.e. a 4 boiler cascade requires 4 pumps.

If using a Low Loss Header or Plate Heat Exchanger not from Ideal Heating please contact your local Ideal Heating Commercial sales representative.

UPM10

Magna 3

Note: pumps with screwed connections are G1.1/2" x 180mm. Pumps with flanged connections are DN40 x 220mm.

SYSTEM LAYOUT

TYPICAL SYSTEM BOILER LAYOUT

Note: this schematic is an illustration of a hydraulic arrangement for discussion and reference use only.

The schematic may not accurately describe the actual arrangement required in order for the system to operate correctly and additional components may be required. Under no circumstances should this be used as basis for procurement, production or installation.

SUGGESTED ENGINEERING SPECIFICATION

The Suggested Engineering Specification is wording designed for specifiers to copy and paste into their specifications to ensure inclusion of Ideal Heating commercial boilers.

OVERVIEW

The boilers must be fully automatically controlled, floor standing, fanned, super-efficient condensing appliances utilising an aluminium silicon alloy heat exchanger and be suitable for connection to fully pumped open vented or sealed water systems.

CONTROLS

The condensing boilers must have connectivity for all common types of BMS integration including 0-10v, volt free and OpenTherm connections. Additional modules may be used for BACnet, LONWorks and MODBus gateways. Where no BMS is present a modulating sequencer must be available.

The boiler must be fully modulating with a 5:1 turndown ratio and include control features enabling set point adjustment, heating circuit control of one constant temperature and one DHW circuit or 2 constant temperature circuits, and safety lock out parameters including fault diagnosis for both boiler and external components such as sensors or pumps.

Boiler capabilities must include, with the use of external components, frost protection, weather or room compensation and system pump control.

FLUE

The condensing boilers must be suitable for use with a room sealed flue or open flue applications including C13, C33 and B23 classifications. The flue outlet and air inlet must be situated at the rear of the boiler.

HYDRAULIC

The condensing boiler must be suitable for connection to fully pumped open vented or sealed water systems. All hydraulic connections including flow return and condensate drain must be located on the rear of the boiler. Hydraulic connections must be uniform across the outputs available in the range to ensure ease of installation and maintenance.

The boiler must have a maximum operating pressure of 6 bar and be suitable for heating and indirect hot water systems.

DIMENSIONS

The condensing boiler must fit within maximum permitted floor space of 1.41m² (320 – 620kW models) or 2.82m² (715 – 1240kW models).

MOUNTING / POSITIONING

The condensing boilers will be floor standing.

EFFICIENCY

The condensing boilers are capable of high seasonal efficiencies with a minimum requirement of 96.8% and low NOx emissions no greater than 38.7mg/kWh.

APPROVALS

The boilers must be tested and certified by BSI to EN 15502 for use with Natural Gas.

Boilers are certified to meet the requirements of the EC Gas Appliance Directive, Boiler Efficiency Directive, EMC and Low Voltage Directive.

The manufacturer must be ISO 9001 accredited.

SPECIFICATION

The boiler will be capable of flow rates for common systems using 11°C to 20°C temperature differentials.

SOURCING

The condensing boiler must be manufactured or finally assembled in the United Kingdom.

WARRANTY

The boiler must be available with a 2 year warranty.

FLUE COMPONENTS

KEY

- A Flue Manifold
- B Flue Condensate Drain Trap
- C Flue Adapter
- D Non Return Valve
- E Flue Elbow
- F Flue Sample Point
- G Flue Bracket Support
- H Flue Increaser

FEATURES

- 300mm diameter connection
- Supplied with Boiler
- Rear clearance of 1m from boiler required for installation
- Height of adapter at exit; 1192mm without flue increaser 1355mm with increaser
- Suitable for vertical or horizontal installations

See pages 84-87 for further system requirements

SYSTEM APPLICATION

Ideal Imax Xtra EL boilers are designed for central heating of commercial premises and also for supplying hot water via a calorifier or plate heat exchanger. They are suitable for fully pumped, open vented or pressurised systems and can be connected to heating and/or hot water systems.

They are not suitable for direct hot water supply or gravity heating/hot water systems.

BOILER	IMAX XTRA EL
Maximum static head:	61 metres (200 feet)
Maximum working pressure:	6 bar (87psi)

Maximum design flow temperature is 80°C open vented adjustable to 90°C for sealed system.

Pump overrun is provided as standard, and a period of 5 minutes must be allowed for in system design.

Frost protection is built into the boiler control, if the boiler sensor falls below 7°C, this will result in the appliance firing.

This will protect the boiler only, not exposed system elements.

SYSTEM LAYOUT

TYPICAL SYSTEM BOILER LAYOUT

LEGEND

Note: this schematic is an illustration of a hydraulic arrangement for discussion and reference use only.

The schematic may not accurately describe the actual arrangement required in order for the system to operate correctly and additional components may be required. Under no circumstances should this be used as basis for procurement, production or installation.

SUGGESTED ENGINEERING SPECIFICATION

The Suggested Engineering Specification is wording designed for specifiers to copy and paste into their specifications to ensure inclusion of Ideal Heating commercial boilers.

OVERVIEW

The boilers must be fully automatically controlled, floor standing, fanned, super-efficient condensing appliances utilising a stainless steel heat exchanger and be suitable for connection to fully pumped open vented or sealed water systems. The boilers must be modular in design with each module capable of delivering 250kW.

CONTROLS

The condensing boilers must have connectivity for common types of BMS integration including 0-10v and volt free connections. The boiler must be fully modulating with a 5:1 turndown ratio per 250kW module and include control features enabling set point adjustment, heating circuit control of one constant temperature and one DHW circuit or 2 constant temperature circuits, and safety lock out parameters including fault diagnosis for both boiler and external components such as sensors or pumps.

Boiler capabilities must include, with the use of external components, frost protection, weather or room compensation and system pump control.

FLUE

The condensing boilers must be suitable for use with a room sealed flue or open flue applications including C13, C33 and B23 classifications. The flue outlet and air inlet must be situated at the rear of the boiler.

HYDRAULIC

The condensing boiler must be suitable for connection to fully pumped open vented or sealed water systems. All hydraulic connections including flow return and condensate drain must be located on the rear of the boiler. Hydraulic connections must be uniform across the modules available in the range to ensure ease of installation and maintenance. The boiler must have a maximum operating pressure of 6 bar and be suitable for heating and indirect hot water systems.

DIMENSIONS

The condensing boiler must fit within maximum permitted floor space of 0.95m² (when installed 1 module wide) or 1.91m² (when installed 2 modules wide).

MOUNTING / POSITIONING

The condensing boilers will be floor standing.

EFFICIENCY

The condensing boilers are capable of high seasonal efficiencies with a minimum requirement of 95.9% and low NOx emissions no greater than 39.7mg/kWh.

APPROVALS

The boilers must be tested by BSI and conform to EN656, EN13856 and EN15417 for use with Natural Gas. Boilers are certified to meet the requirements of the EC Gas Appliance Directive, Boiler Efficiency Directive, EMC and Low Voltage Directive.

The manufacturer must be ISO 9001 accredited.

SPECIFICATION

The boiler will be capable of flow rates for common systems using 20°C temperature differentials.

SOURCING

The condensing boiler must be manufactured or finally assembled in the United Kingdom.

WARRANTY

The boiler must be available with a 2 year warranty.

SYSTEM APPLICATION

Ideal Evomod boilers are designed for central heating of commercial premises and also for supplying hot water via a calorifier or plate heat exchanger.

They are suitable for fully pumped, open vented or pressurised systems and can be connected to heating and/or hot water systems.

They are not suitable for direct hot water supply or gravity heating/hot water systems.

BOILER	EVOMOD
Maximum static head:	61 metres (200 feet)
Maximum working pressure:	6 bar (87psi)

Maximum design flow temperature is 80°C (180°F)

Pump overrun is provided as standard, and a period of 2 minutes must be allowed for in system design.

Frost protection is built into the boiler control, if the boiler sensor falls below 5°C, this will result in the appliance firing.

This will protect the boiler only, not exposed system elements.

RANGE PACKAGING

Evomod 250, 500, 750

The boiler is delivered on a wooden pallet with protective cardboard packing pieces at the front. The side panels and bottom side panels are contained within cardboard packs strapped to the sides of the boilers. The footer is contained in a cardboard box, strapped to the boiler, or placed on the flue header pallet. All condensate traps are individually boxed and stored within the footer box. A protective plastic wrap protects the contents of the pallet. The flue components are in a cardboard box on a separate pallet.

The optional water connection kit (250) comes in a separate box, the optional header kits (500, 750, 1000) come on a separate pallet.

Evomod 1000

This boiler comes packed as above except the boiler is split onto 2 pallets. The header assembly comes split across 2 pallets + a gas manifold.

LIST OF PACK CONTENTS:

1. Boiler on pallet(s)

2. Side panel pack(s)

3. Footer pack(s)
inc. condensate traps

4. Flue components

To unpack the boiler:

• Remove the plastic wrap

• Unstrap and remove side panel boxes, store in a safe place

• Lift off footer box, store in a safe place

• Retrieve the condensate trap boxes from within the footer box, store in a safe place.

• Remove the protective cardboard packing from the front.

• Remove all screws from the wooden pallet and disassemble the pallet.

A full commissioning service is available at an extra charge.

TYPICAL SYSTEM BOILER LAYOUT

Note: this schematic is an illustration of a hydraulic arrangement for discussion and reference use only.

The schematic may not accurately describe the actual arrangement required in order for the system to operate correctly and additional components may be required. Under no circumstances should this be used as basis for procurement, production or installation.

table

EVOJET

150 - 3000kW

Ideal for larger systems and heat networks - space saving alternative to larger cascades of multiple smaller boilers. The Evojet range of condensing pressure jet and blown gas boilers is made up of 14 models with outputs from 150 to 3000kW. Floor standing and suitable for applications in either single or multiple configurations.

Floor standing

BIM

Pressure jet

Dual fuel

Part L 2022

FEATURES AND BENEFITS

- Up to 109.3% part load efficiency
- Designed to operate up to 40°C ΔT providing minimum flow rates are achieved
- Dedicated low temp return
- Stainless steel heat exchanger
- Triple flue pass for high operating efficiencies
- Multiple burner options available
- Modulation via 0-10 volt BMS, or RWF controller
- 4 new models: 1750kW, 2100kW, 2600kW and 3000kW
- 14 models in total with outputs from 150kW to 3000kW
- Floor standing for applications in either single or multiple configurations

SUGGESTED ENGINEERING SPECIFICATION

The Suggested Engineering Specification is wording designed for specifiers to copy and paste into their specifications to ensure inclusion of Ideal Heating commercial boilers.

OVERVIEW

The boiler must fully automatically controlled, floor standing condensing boiler with a triple flue pass stainless steel heat exchanger. While they are designed primarily for central heating purposes, in conjunction with a suitable storage cylinder they can also be used to produce domestic hot water on fully pumped sealed water systems.

All parts that come into contact with the combustion gases are made from titanium stabilised stainless steel to ensure maximum resistance to the corrosive action of acid condensation.

The boiler must incorporate two return water connections to facilitate multiple applications e.g. CH and DHW and enables the optimum operating efficiency to be achieved.

The boilers must be designed to operate with **Natural Gas, LPG or Oil** (delete as required) using pressure-jet or premixed burners. The burner specification will enable the choice of Two Stage / Fully Modulating and Low NOx operation.

CONTROLS

The boiler control options must be selected at the time of purchase:

- Two Stage Burner
- Modulating Burner
- BMS (Boiler Management System) 0-10V
- Oil and Dual Fuel

The boiler must include control features enabling set point adjustment, heating circuit control of one constant temperature, one variable temperature and one DHW circuit and safety lock out parameters including fault diagnosis for both boiler and external components such as sensors or pumps.

Boiler capabilities must include, with the use of external components, frost protection, weather or room compensation and system pump control.

FLUE

The condensing boilers must be suitable for use with an open flued application in B23 configuration. The B23P configuration can only be used with a premix gas burner.

HYDRAULIC

The condensing boiler must be suitable for connection to fully pumped sealed water systems. All hydraulic connections including flow return and condensate drain must be located on the bottom or rear of the boiler. The boiler must have a maximum operating pressure of 6 bar and be suitable for heating and indirect hot water systems.

DIMENSIONS

The condensing boiler must fit within maximum permitted floor space of 0.97m² (150 and 210kW models)/1.23m² (270 and 350kW models)/1.47m² (450 and 900kW models)/2.03m² (800 and 1000kW models)/2.40m² (1250kW model)/2.67m² (1450kW model)/6.34m² (1750kW model)/7.04m² (2100kW model)/8.19m² (2700kW model)/9.00m² (3000kW model).

MOUNTING / POSITIONING

The condensing boilers will be floor standing.

EFFICIENCY

The condensing boilers are capable of high seasonal efficiencies with a minimum requirement of 95.9% and low NOx emissions no greater than 39.7mg/kWh.

APPROVALS

The manufacturer must be ISO 9001 accredited.

SPECIFICATION

The boiler must be capable of the below flow rates:

WARRANTY

The boiler must be available with a 2 year warranty.

BOILER MODEL	MIN FLOW (L/H)
150	1,700
210	2,400
270	3,100
350	4,000
450	5,100
600	6,800
800	9,100
1000	11,400
1250	14,200
1450	16,500
1750	20,400
2100	24,500
2600	30,400
3000	35,000

PLACE OF INSTALLATION

Evojet steel boilers must be installed in a dedicated boiler room, with adequately sized vents, in compliance with BS 6644.

If at all possible, the boiler should be installed on a raised base to stop the burner fan sucking up dust and to facilitate installation of a condensate drain system.

The boiler condensate drain must be located above the height of the lid of the system's condensate neutraliser if fitted.

The gas supply pipe must be installed in such a way that the boiler's panelling can be removed and the front door opened without having to remove the burner.

* Front clearance can be reduced dependent on the burner used and consideration for turbulator removal

**For further guidance on clearances refer to the installation manual

NB top clearance for all models $\geq 1000\text{mm}$

EVOJET TEMPERATURE CONTROL

The standard Evojet boiler controller is suitable for controlling the temperature using a single jet burner.

The control panel must be installed on one of the boiler side panels in the vertical orientation.

CONTROL PANEL FEATURES INCLUDE:

- Robust ABS housing
- Thermometer
- Overheat lockout / reset button
- Burner lockout indicator
- Compatible with modulating burner controls utilising 0-10 volt BMS
- Compatible with modulating burner controls utilising RWF option

SYSTEM APPLICATION

Ideal Evojet boilers are designed for central heating of commercial premises and also for supplying hot water via a calorifier or plate heat exchanger. They are suitable for fully pumped, pressurised systems and can be connected to heating and/or hot water systems.

They are not suitable for open vented, direct hot water supply or gravity heating/hot water systems.

BOILER	EVOJET
Maximum static head:	61 metres
Minimum static head:	10 metres
Maximum working pressure:	6 bar
Minimum working pressure:	1 bar
Maximum design flow temperature:	90 °C

TYPICAL SYSTEM BOILER LAYOUT

Note: this schematic is an illustration of a hydraulic arrangement for discussion and reference use only.

The schematic may not accurately describe the actual arrangement required in order for the system to operate correctly and additional components may be required. Under no circumstances should this be used as basis for procurement, production or installation.

EVOJET 150 - 1250 MODELS:

EVOJET 1450 MODEL:

SYSTEM CONNECTIONS

Evojet boilers are designed and made for use in central heating installations, but can also be used for domestic hot water production if connected to suitable sub-systems. Water fittings are as specified in the following table:

I - Height of flue gas outlet	405	405	545	545	645	645	680	680	720	805	mm
L - Height of boiler drain fitting	60	60	55	55	75	75	95	95	105	85	mm
M - Boiler centreline	345	345	375	375	395	395	475	475	535	565	mm
N - Distance from burner head to door	110	110	120	120	125	125	125	125	140	150	mm
O - Distance from boiler drain fitting	132	132	137	137	125	125	175	175	180	180	mm

*All flanged connections are PN6 according to EN 1092-1

EVOJET 1750 - 3000 MODELS:

SYSTEM CONNECTIONS

Evojet boilers are designed and made for use in central heating installations, but can also be used for domestic hot water production if connected to suitable sub-systems. Water fittings are as specified in the following table:

DESCRIPTION	BOILER MODEL				
	1750	2100	2600	3000	
1 - System delivery*	150	200	200	200	DN - PN6
2 - 2nd return (high temperature)*	100	150	150	150	DN - PN6
3 - 1st return (low temperature)*	150	200	200	200	DN - PN6
4 - Safety valve drain	80	100	100	100	DN - PN6
5 - Condensate drain	1 1/4"	1 1/4"	1 1/4"	1 1/4"	Ø"
6 - Boiler drain	1 1/2"	1 1/2"	1 1/2"	1 1/2"	Ø"
7 - Flue gas exhaust fitting	200	200	250	250	Ø" mm
8 - Instrument bulb/probe sockets	3 x 1/2"	3 x 1/2"	3 x 1/2"	3 x 1/2"	n° x Ø"
A - Distance from burner head to heating flow outlet	465	465	465	465	mm
B - Distance between heating flow outlet and safety device fitting	1348	1550	1850	1850	mm
C - Distance between safety device fitting and heating return 2	950	1000	1050	1250	mm
D - Distance between heating returns 2 and 1	665	815	880	860	mm
E - Distance from heating flow outlet to return 1	2963	3365	3780	3960	mm
F - Height of heating return 1	1060	1060	1150	1210	mm
G - Height of boiler drain	140	140	114	114	mm
H - Height of boiler flanges	1945	1945	2070	2170	mm
I - Height of condensate drain	180	180	170	163	mm
L - Width of boiler base frame	1750	1750	1850	1950	mm
M - Distance to boiler drain fitting	120	120	115	115	mm
N - Distance to boiler return 1 flange	215	215	220	220	mm
O - Length of boiler base frame	3212	3612	4024	4206	mm
P - Overall length of boiler	3620	4020	4425	4605	mm
Q - Burner axis	1060	1060	1150	1210	mm
R - Plinth height	100	100	100	100	mm

UNIVERSAL SYSTEM REQUIREMENTS OF COMMERCIAL CONDENSING BOILER RANGE

OPEN SYSTEMS - (EXCLUDING EVOJET)

The system should be vented directly off the boiler flow pipe, as close to the boiler as possible. The cold feed entry should be inverted and **MUST** be positioned between the pump and the vent, and not more than 150mm (6") away from the vent connection.

There should be a minimum height, 500mm (20") of open vent above the cistern water level. The vertical distance between the highest point of the system and the feed/expansion cistern water level **MUST** not be less than **DIM A**.

The information provided is based on the following assumptions:

The boiler is at the highest point of the circulation system. Systems designed to raise above the flow tappings will, of course, automatically require a minimum static head higher than shown.

The position of the open vent/safety pipe above the expansion cistern water level is given as a guide only. The final position will depend upon particular characteristics of the system. Pumping over of water into the expansion cistern should be avoided.

COLD FEED/OPEN VENT

The independent cold feed and the open vent must comply with BS 6644 and be of the following minimum size:

BOILER OUTPUT (KW)	COLD FEED	OPEN VENT
60 - 150	1" (25mm)	1¼" (32mm)
151 - 300	1¼" (32mm)	1½" (38mm)
301 - 600	1½" (38mm)	2" (50mm)
601>	2" (50mm)	$A=3.5 \times Q_r$

The minimum cross-sectional area of the venting pipe(s), A (in mm²) shall be determined using the equation shown here.

Where: Q_r is the rated heat output (kW)

SEALED SYSTEMS

Note: The method of filling, refilling, topping up or flushing sealed primary hot water circuit from the mains for a non-domestic property is shown below.

EVOMAX 2 - 30 - 150kW

GENERAL

- A.** The information and guidance given above is not intended to override any requirements of these publications or the requirements of the local authority, gas or water undertakings.
- B.** The installation should be capable of working with flow temperatures of up to 90°C and a temperature differential of up to 20°C.
- C.** All components of the system, including the heat exchanger of the indirect cylinder, must be suitable for a working pressure of 4 bar/58 psi and temperature of 110°C. Care should be taken in making all connections so that the risk of leakage is minimised.
- D.** The boiler is fitted with an automatic air vent, located in the left top side of the interior. This air vent must never be shut off, as this could result in dry firing of the boiler and subsequent damage to the heat exchanger.

SAFETY VALVE

A spring loaded safety valve complying with the relevant requirements of BS EN ISO 4126-1 must be fitted in the flow pipe as close to the boiler as possible and with no intervening valve or restriction. The valve should have the following features:

- A.** A non-adjustable preset lift pressure not exceeding 4 bar /58 psi
- B.** A manual testing device.
- C.** Provision for connection of a discharge pipe. The valve or discharge pipe should be positioned so that the discharge of water or steam is visible, but will not cause hazard to user or plant.

PRESSURE GAUGE

A pressure gauge covering at least the range 0-4bar must be fitted to the system. The gauge should be easily seen from the filling point and should preferably be connected at the same point as the expansion vessel.

EXPANSION VESSEL

Expansion vessels used must comply with BS EN 13831 Connection to the system must not incorporate an isolating valve.

FLOOR STANDING BOILERS

Particular reference should be made to:

- BS 6644:2011 Specification for the installation and maintenance of gas-fired hot water boilers of rated inputs between 70 kW (net) and 1.8 MW (net) (2nd and 3rd family gases), BSI Standards Publication, November 2011
- INDG436 Safe management of industrial steam and hot water boilers, Health and Safety Executive, October 2011
- BG02 Guidance on Safe Operation of Hot Water Boilers, The Combustion Engineering Association and Safety Assessment Federation, May 2019

The information and guidance given below is not intended to override any requirements of either of the above publications or the requirements of the local authority, gas or water undertakings.

In general commercial closed pressurised systems are provided with either manual or automatic water make up. In both instances it will be necessary to fit automatic controls intended to protect the boiler, circulating system and ancillary equipment by shutting down the boiler plant if a potentially hazardous situation should arise.

Examples of such situations are low water level and operating pressure or excessive pressure within the system. Depending on circumstances, controls will need to be either manual or automatic reset. In the event of a shutdown both visual and audible alarms may be necessary.

Expansion vessels used must comply with BS EN 13831:2007 and must be sized on the basis of the total system volume and initial charge pressure.

Initial minimum charge pressure should not be less than detailed in the chart below and must take account of the static head and specification of the pressurising equipment.

BOILER RANGE	INITIAL MINIMUM CHARGE PRESSURE
Imax Xtra and Imax Xtra 2	0.5 bar / 7.2psi
Imax Xtra EL	1.2 bar / 15.0psi
Evomod	1.0 bar / 14.7 psi
Evojet	0.5 bar / 7.2psi

When make up water is not provided automatically it will be necessary to fit controls which shut down the plant in the event of the maximum system pressure approaching to within 0.35bar / 5psi of the safety valve setting.

Other British Standards applicable to commercial sealed systems are:

BS 6880-2

BS EN 13076

BS EN 13077

BE EN 14451

BS EN 1567

VENTILATION

OPEN FLUED APPLICATION

Safe, efficient, and trouble-free operation of conventionally flued gas boilers is vitally dependent on the provision of an adequate supply of fresh air to the room in which the appliance is installed.

Ventilation by grilles communicating directly with the outside air is required at both high and low levels. The minimum free areas of these grilles must be in accordance with BS 6644 or IGE UP10. The use of an extractor fan in the same room as the boiler (or in an adjacent room in communication) can, in certain conditions, adversely affect the safe operation of the boiler. Where such a fan is already fitted, or if an extractor fan is likely to be installed at a later date, then the advice of the gas supplier should be obtained.

BS 6644 - Inputs greater than 70kW (net)

TOTAL GROSS INPUT RATING OF BOILERS	POSITION OF AIR VENTS	AIR VENT AREAS* (CM ²) (AIR DIRECT FROM OUTSIDE)	
		Boiler room	Enclosure
70kW to 1.8MW	High level	2	5
70kW to 1.8MW	Low level	4	10

*Required area is cm² per kW of net input. Note: where a boiler installation is to operate in summer months (e.g. DHW) additional ventilation requirements are stated. If operating for more than 50% of time refer to BS 6644.

BALANCED FLUE APPLICATIONS

Room sealed installations require no air from the boiler house for combustion as this is drawn direct from the outside atmosphere.

However, air may be required to ventilate the boiler house and remove any excess heat generated by the boiler (2cm² free area per kW net heat input at both high and low level BS 6644).

Imax Xtra boilers have an air inlet connection which may be used with proprietary ducting if required.

A separate flue connection is still required.

WATER TREATMENT

IMPORTANT

The application of any other treatment to this product may render the guarantee of Ideal Boilers Limited Invalid.

Ideal Heating recommend Water Treatment in accordance with the Benchmark Guidance Notes on Water Treatment in Central Heating Systems.

If water treatment is used Ideal Heating recommend only the use of Scalemaster Gold 100, Fernox, MB-1, Adey MCI, Sentinel-X100, CALMAG CM100 inhibitors and associated water treatment products, which must be used in accordance with the manufacturers' instructions.

NOTES

1. It is most important that the correct concentration of the water treatment products is maintained in accordance with the manufacturers' instructions.
2. If the boiler is installed in an existing system any unsuitable additives MUST be removed by thorough cleansing. BS 7593 details the steps necessary to clean a domestic heating system.
3. In hard water areas, treatment to prevent lime scale may be necessary - however the use of artificially softened water is NOT permitted.
4. Under no circumstances should the boiler be fired before the system has been thoroughly flushed.

COMMERCIAL RANGE OVERVIEW

CONDENSING BOILERS

EVOMAX 2

- The UK's number one wall-mounted commercial boiler
- Wall hung
- Aluminium alloy heat exchanger
- 30 - 150kW
- 30 - 120kW LPG
- Cascades up to 6 boilers for outputs up to 900kW

IMAX XTRA 2

- Floor standing
- Aluminium alloy heat exchanger
- 80 - 280kW
- Cascade up to 4 boilers for 1120kW output

IMAX XTRA EL

- Floor standing
- Aluminium alloy heat exchanger
- 320 - 1240kW
- Available in 10 models for single or multiple installations

EVOMOD

- Floor standing
- Stainless steel heat exchanger
- Modular
- 250-1000kW
- Up to 1MW output from a single unit, ideal for smaller spaces

EVOJET

- Floor standing
- Stainless steel heat exchanger
- 150 - 3000kW
- Condensing Pressure Jet
- Natural Gas, LPG, Oil or Dual Fuel
- 2 year warranty

POD

HEAT INTERFACE UNIT BY IDEAL HEATING

MADE WITH EVERYONE IN MIND

Created with our years of experience in creating domestic boilers, POD combines the efficiency available from an HIU with the simplicity of use expected from a boiler. Available in Indirect and Direct models, there is a variant for every heat network.

POD has been designed to look and work like a domestic boiler. It features a straightforward user interface and is easy to control via its OpenTherm compatibility. Also like a domestic boiler, it will fit in a kitchen cupboard.

HEAT NETWORKS AND HEAT INTERFACE UNITS: A ROUTE TO DECARBONISATION

The need to reduce harmful greenhouse gas emissions is recognised across the world in response to global climate change. With the UK target to achieve Net Zero greenhouse gas emissions by 2050, both government and customers are focused on a greener future.

There will not be one single technology to enable the UK to achieve its Net Zero target and a diverse range of solutions to decarbonise heat must be considered. These solutions must not only deliver reduced carbon emissions but do so in a way that affords stakeholders the least disruption as possible.

Heat networks, also known as district heating, are one of those solutions. They are energy agnostic; there are many options for the fuel that can be used in the energy centre, from natural gas to renewables and waste heat from other buildings or processes.

An energy centre creates hot water that is then shared via a distribution network. Heat Interface Units (HIUs) act as a conduit to take the energy from the distribution network into each dwelling. Heat networks can be as large as a whole city or as small as a block of flats but all reduce energy consumption and emissions.

TRAINING AND AFTERSALES SUPPORT

WE ARE COMMITTED TO DELIVERING THE HIGHEST LEVEL OF CUSTOMER SERVICE. WITH MORE THAN 100 YEARS' EXPERIENCE IN THE HEATING INDUSTRY WE ARE TRUSTED BY CUSTOMERS ACROSS THE UK.

Dedicated support and years of experience

Ideal Heating lead the way in commercial applications, by ensuring our heating products stay at the forefront of technology, delivering both high efficiency solutions and low running costs, in line with the key market trends and legislation.

At the centre of this trust is the support and unrivalled heating experience

provided by our dedicated technical and service engineering team.

The UK contact centre is open 364 days a year, with calls answered directly in person by fully trained members of staff. They can assist with enquiries or help to diagnose and resolve queries over the telephone. Engineer visits are also available for complex projects.

Get skilled with our expertise?

All Ideal Heating engineers have years of expertise across the full range of heating solutions and are fully trained to the highest possible standards, including all being Gas Safe registered.

The only UK Heating manufacturer accredited to deliver in-house F-Gas training and accreditations**, We are registered members of Refcom Elite.

Our training managers:

Your training manager has extensive experience and qualifications that span across the heating and gas industries.

Working closely alongside our product managers, research and development departments and national network of service engineers, they will provide insights and technical information unavailable elsewhere.

We also invest in developing their training techniques and skills so that you benefit from the best possible training experience. Our courses utilise modern training techniques to help you best retain knowledge, build skills and enjoy the experience.

Investment in state-of-the-art training centres

Ideal Heating commercial customers are further supported with the availability of high-level training. Delivered at state-of-the-art Centres of Excellence, including new flagship training venues in Hull, Leeds and Luton.

The training team also operate from a further 15 locations in the UK, backed-up by our unique mobile roadshow events our full-time expert training managers offer a wide range of comprehensive courses, which can be customised for individual installation and servicing companies.

TRAINING LOCATIONS

Our training centres are accredited for BPEC and City and Guilds.

Since 2012 we have invested over £10m on providing free or low-cost training to heating installers across the UK and Ireland.
