HEATING

IMAX XTRA VIZION

IDEAL COMMERCIAL CASE STUDY

“IMAX XTRA PROVIDED THE EXTRA HEAD ROOM NEEDED FOR THE HEATING SOLUTION TO LAST”

With a plant room situated in the loft of an office, Ideal Commercial Boiler's Imax Xtra provided the extra head room needed for the heating solution to last.

Vizion Network is a vehicle repair solutions company, that operates from The Deep Business Centre in Hull and Wellington House in Wellingborough. Significant refurbishment was planned for their Wellingborough based office, which included an update to the boilers.

CASE STUDY FACTS:

LOCATION: VIZION NETWORK, WELLINGBOROUGH, NORTHAMPTONSHIRE | **INSTALLATION:** IMAX XTRA BOILERS

Sterling Installations provides commercial and Industrial gas work, as well as oil and renewables, within the Wellingborough area. Their area covers the surrounding villages and reaching out to Milton Keynes and Northampton. Sterling installations were appointed by Vizion Network to complete the boiler upgrade at their Wellingborough office, as they both had an established relationship with each other through previous projects.

Scott Hymus, Engineer at Stirling Installations said:

“We were approached by Vizion Network as we had a long-standing relationship with them. They trust us and trust our judgement.”

The project required a complete upgrade to their near obsolete boilers in their plant room which was situated in the loft.

“THE IMAX XTRA IS A FANTASTIC BOILER”

“The project was really interesting for us as a company, due to the logistical issues of actually being able to get the old boilers out of the loft plant room and getting the new boilers in.” Said Scott.

In order to remove the existing boilers from the loft, an action plan was put in place. On the third floor of the building an access hatch was cut into the ceiling and a custom made steel gantry was made so that they were able to lift the old boilers out and bring the new ones in.

Due to the restricted height in the plant room, mounting Ideal Commercial's Evomax boilers on a frame and header would not be viable. Therefore, a floor standing boiler would be the only way to resolve this heating solution.

“With the help of Ideal Commercial, we chose to fit two Imax Xtra boilers. They were floor standing, which gave us the height and the headroom that was needed to fit the flues above them.” Scott explained. **“The Imax Xtra is a fantastic boiler; they were chosen due to advice given by Ideal**

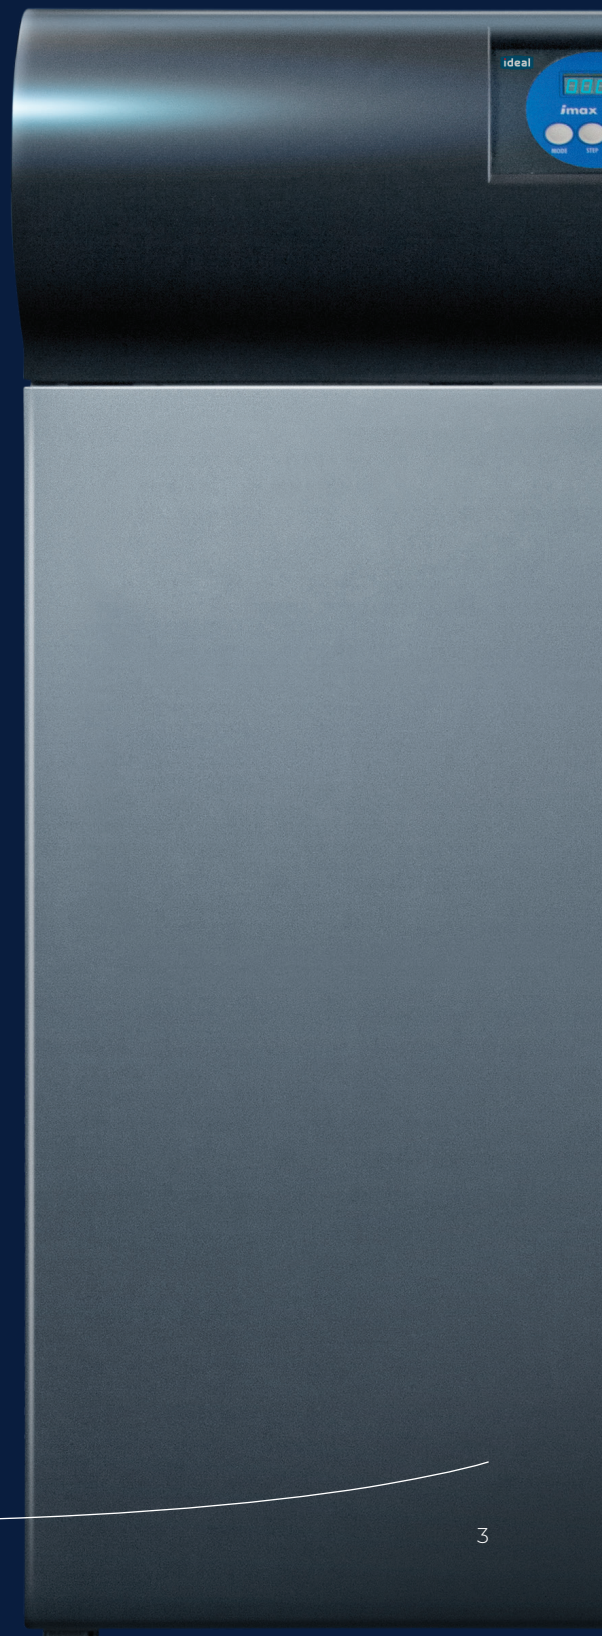

Technical. They are very robust and will suit older heating systems where low water temperatures cannot necessarily be achieved.”

Two Imax Xtra 160kW boilers, making a total output of 320kW installed as the heating solution for the project. Their small footprint benefited the installation process, as well as the spatial constraints for the flues.

The Imax Xtra range is available in outputs from 80 to 280kW, the floor standing condensing commercial boiler includes many features and benefits such as a high 5:1 turndown, inbuilt commissioning and fault diagnostics and up to 107.5% net efficiency when fully condensing.

Scott concluded: “We pride ourselves in the quality of work we provide and the service we provide for the customer. But that service can only be offered with the quality of product we are installing. It was really a no brainer for us that Ideal Commercial were going to be the boilers that we would choose to fit.”
